

## Lab 2.4.17.3 Conditions and conditional executions: part 3

### Objectives

Familiarize the student with:

- Conditions and conditional executions
- Fixing errors in a program
- Printing on screen

### Scenario

Write a program that prints the name of a given day of the week. Your program must print the same result as the expected output. Test it for all days of the week (for now, test it only for valid values).

```
#include <stdio.h>
```

```
int main(void)
{
    int dayOfWeek = 1;
    /* your code */
    return 0;
}
```

### Example output

The day of the week is: Monday
