

Lab 2.3.19.1 Character types and values: part 1

Objectives

Familiarize the student with:

- Character types and values
- Fixing errors in a program
- Printing on screen

Scenario

Check the program below. Find all possible compilation errors and logic errors. Fix them, but you may not change any character values. Your version of the program must print the same result as the expected output. Before you use your compiler, try to find the errors only by manual code analysis.

```
#include <stdio.h>

int main()
{
    printf("Diff beetween '%c' and '%c' is : %d\n", 'c', 'a', 'c', 'a');
    printf("Diff beetween '%c' and '%c' is : %d\n", 'a', 'c', 'a', 'c');
    return 0;
}
```

Example output

```
Diff beetween 'c' and 'a' is : 2
Diff beetween 'a' and 'c' is : -2
```
