Lab 2.4.17.2 Conditions and conditional executions: part 2

Objectives

Familiarize the student with:

- Conditions and conditional executions
- Fixing errors in a program
- Printing on screen

Scenario

Write a small program which prints the absolute value of a number only if the number is less than zero. Next it should print the value of a given number. Print it on separate lines. Your program must print the same result as the expected output. Test it for several other cases (positive numbers, other negative numbers etc.).

```c
#include <stdio.h>

int main(void)
{
 int n = -3;
 /* your code */
 return 0;
}
```

Example output

```
The absolute value of -3 is 3
The value of n is -3
```
